1

INTRODUCTION

The AI-Based Movie **Recommendation System** suggests movies to users based on their preferences using Artificial Intelligence and Machine Learning techniques.

It helps users discover movies they are likely to enjoy.

2

OBJECTIVES

To provide personalized movie recommendations.

To analyze user preferences and movie features.

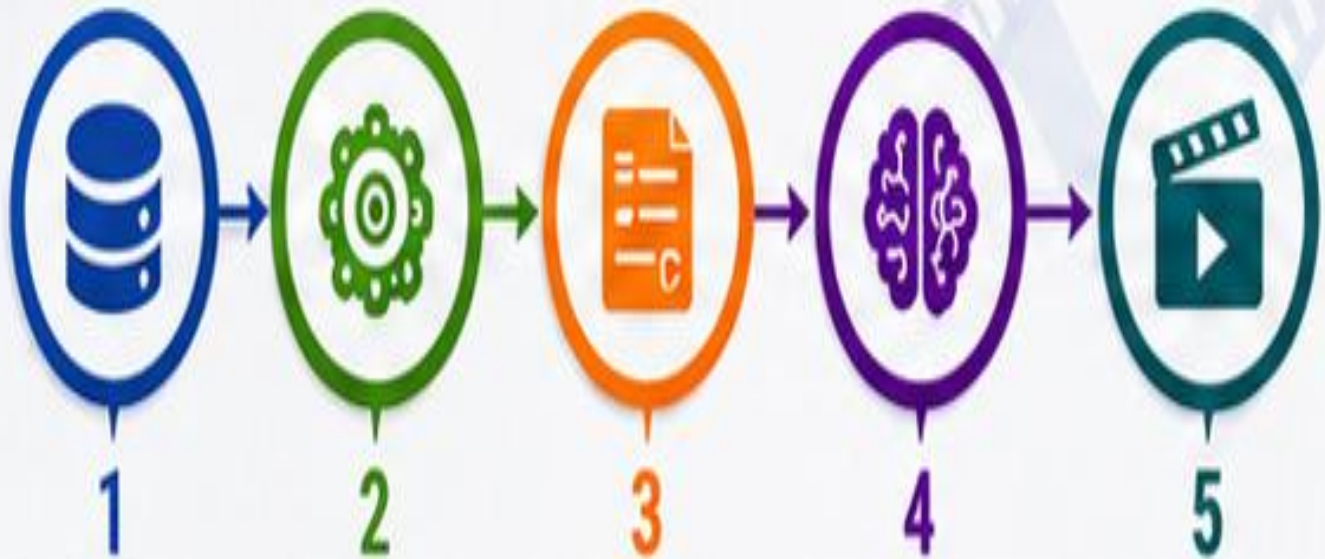

To improve the movie selection process.

To demonstrate the application of AI in recommendation systems.

3

METHODOLOGY

Data Collection

Collect movie dataset (titles, genres, ratings, descriptions, etc.)

Preprocessing

Clean and prepare the data for analysis.

Feature Extraction

Extract important features like genres, keywords, ratings.

Recommendation Model

Apply AI/ML algorithm to generate recommendations.

Results

Display top recommended movies to the user.

4

RESULTS

- ✓ Successfully recommends movies based on user preferences.
- ✓ Provides relevant and personalized suggestions.
- ✓ Improves user experience and saves time.
- ✓ Achieves high accuracy in recommendations.

5

CONCLUSION

The **AI-Based Movie Recommendation System** effectively recommends movies based on user preferences.

It enhances user satisfaction by providing accurate and personalized recommendations.

This project demonstrates the power of AI in the entertainment industry.

Thank You!
